Notice Period: Immediate Joiner

PROFESSIONAL SUMMARY

Senior Frontend Developer / Full Stack Developer with 6+ years of experience building scalable web applications using Angular, React, TypeScript and JavaScript with backend expertise in Node.js and Express.js. Specialized in microfrontend architecture, reusable component design, frontend performance optimization, and modernizing legacy Angular applications. Experienced in building enterprise-grade platforms, integrating REST APIs, and delivering maintainable, high-performance UI systems with improved application performance by up to 30%. Immediate joiner.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3

Frontend: Angular (v2+ to 17+), React, RxJS, NgRx, Angular Material, Ionic Angular, Bootstrap, Microfrontends, Responsive Design

Backend: Node.js, Express.js, REST APIs

Databases: MongoDB, PostgreSQL, Firebase

Cloud & DevOps: AWS (EC2, S3), Docker, GitLab CI/CD, Heroku

Tools: Jest, Git, GitHub, GitLab, Postman, Figma

Practices: Agile Development, Performance Optimization, Component Architecture, System Design, API Integration, Test-driven Development, Code Reviews

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer | VVDN Technologies (Client: Extreme Networks)

Oct 2024 – July 2026 | Bengaluru

- Architected the EP1 enterprise network management platform using Angular within a microfrontend architecture.
- Engineered robust frontend modules for real-time network monitoring, elevated application responsiveness by 20% and improved code maintainability.
- Modernized legacy Angular applications by supporting migration to newer Angular versions, enhancing performance and code maintainability.
- Designed reusable UI components and integrated REST APIs, reducing feature delivery time by 35% and enhancing code reusability across modules.
- Prototyped a React-based solution integrating Exotel and Vapi AI APIs for voice communication workflows and AI-driven interaction flows.

Senior Frontend Engineer | Fingent Global Solutions

Apr 2022 – Aug 2024 | Bengaluru

- Led frontend development of the ADAPT+ event management platform using Angular, delivering enterprise-grade modules for event workflows and user management.
- Implemented automated unit testing with Jest, reducing regression issues and improving code reliability across releases.
- Built reusable UI components and optimized frontend performance, accelerated load times by 30%.
- Engineered multi-vendor platform by developing feature-rich dashboards and strengthened user experience for vendor operations.

Frontend Engineer | INIT Solutions

Sep 2021 – Mar 2022 | Bengaluru

- Scaled and mentored a team of 3 developers while delivering the Wonderla website and multilingual ticketing platform.
- Modernized legacy frontend architecture by migrating to Angular, reducing bundle size by 40% and improving maintainability and scalability.
- Developed the Peace Gate mediation platform using Angular and .NET, building role-based modules for structured workflow management.
- Engineered the mobile application using Ionic Angular, improving cross-device accessibility and expanding user reach.

Frontend Engineer | Zpacetech

Jul 2020 – Aug 2021 | Bengaluru

- • Designed and developed a customer ticket management platform from scratch, reducing average support response time by 25% and handling 1,000+ tickets per month.
- • Deployed and optimized application infrastructure on AWS S3 and EC2, maintaining 99.5% uptime and ensuring reliable system performance.
- • Delivered 5+ client-facing features per sprint in a fast-paced startup environment, improving product delivery speed and customer experience.

KEY PROJECTS

EP1 Network Management Platform (Angular, TypeScript, RxJS)

• Built real-time monitoring modules for enterprise network systems across 500+ sites, improving issue detection speed and reducing mean time to resolution by 20%. Developed reusable Angular components for device status, alerts and topology views with RxJS-driven live updates.

EV Charging Management Platform (Angular, MongoDB)

• Designed operational dashboards providing real-time visibility into 200+ EV charging stations, enabling efficient fleet monitoring and data-driven decisions. Implemented station status, usage analytics and operator views in Angular for day-to-day charging operations.

Multi-Vendor E-Commerce Platform (Angular, Node.js, MongoDB, AWS)

• Developed vendor dashboards and admin dashboards / admin panels for 30+ vendors, boosted frontend scalability and reduced onboarding time by 15%. Built catalog, order and vendor-management screens so admins could onboard sellers and monitor platform activity.

Wonderla Website Platform (Angular, TypeScript, Ionic Angular)

• Rebuilt the booking and ticketing flow used by 100K+ monthly users, optimized page load time by 35% and enhanced responsive user experience. Delivered park tickets, slot booking and multilingual pages for web and mobile.

Peace Gate (Angular, .NET, SQL)

• Online negotiation, mediation and arbitration platform. Built role-based modules for structured workflow management. Enabled case creation, party assignment and status tracking across negotiation stages.

I Tracker (Angular, Node.js, PostgreSQL)

• Platform for supermarket item transactions using Angular frontend with Node.js and PostgreSQL. Designed database schemas and queries for products, stock and billing so transactions and inventory stayed consistent.

GET FOLLOW (Angular, MongoDB, S3 Bucket)

• Initiated project from scratch using Angular, MongoDB and AWS S3 Bucket. Built an application to track delivery boys in real time, including live location, assignment status and delivery progress for field operations.

INR PAY (Angular)

• Money transferring and bill payments front-end development. Collaborative team project. Built flows for send money, mobile recharge, electricity bill pay, DTH/TV recharge and other utility payments through a single Angular interface.

Moodify — AI-Powered Mood to Playlist Generator (React, TypeScript, Node.js, Express, Spotify API, OpenRouter)

• Engineered an end-to-end AI-powered music discovery platform that converts natural language mood inputs into personalized Spotify playlists using LLM-based mood analysis, Spotify OAuth and playlist automation. Delivered 20-track playlists in 5–8 seconds through a fully deployed production workflow.

EDUCATION

Bachelor of Science in Computer Science (2018–2020)

Calicut University
